*Trusted data from CybelAngel and SecurityScorecard help you drive resilience and agility.*

03

### Stay Ahead of Threats

*Actionable insights enable you to stay ahead of threats before they fall into the wrong hands.*

04

### Single Pane of Glass

*Combine security ratings and leaked information in one place to mitigate risk, faster.*

## Overview

Nearly 60% of businesses have experienced a major data breach caused by a third party. Root causes are diverse: leaking data from misconfigured cloud buckets, PII records on unprotected file servers, source code on unsecured public repositories, or credentials exposed on the dark web. In all cases, when critical information is breached your business, brand and reputation are damaged. Don't wait for these data leaks to turn into major data breaches.

CybelAngel data integrated into SecurityScorecard gives you an aggregated view into exposed confidential documents and credentials that have been found online, across various layers of the internet. Detect trade secrets stored on unprotected connected storage. Scan instances of MySQL, PostgreSQL, MongoDB, MariaDB and Elasticsearch for exposed logins and API keys. By monitoring the clear, deep & dark web, identify newly compromised credentials being shared or sold and take action, instantly. Get a comprehensive view across all new digital risks.

## Highlights

**10 Billion**

Exposed email addresses and passwords in CybelAngel's data lake

**11+ Million**

Continuously monitored companies by SecurityScorecard

**800,000**

Exposed documents detected per minute on the web by CybelAngel

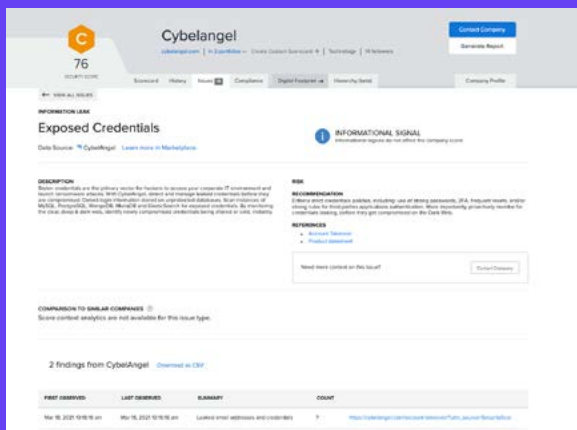

**30+ Billion**

Security issues discovered per month by SecurityScorecard

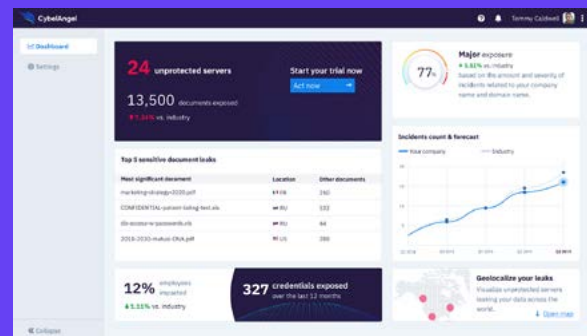

## Getting Started

CybelAngel data is available to SecurityScorecard customers for their own company. Learn more and deploy the integration in the SecurityScorecard platform.

## Using SecurityScorecard and CybelAngel Together

*CybelAngel data is pre-integrated into SecurityScorecard, providing an aggregated view of confidential documents and credentials found online.*

*When leaked data is detected for your organization, you will get access to your Exposure Dashboard with more details for you to take action.*

## About CybelAngel

CybelAngel is the world-leading digital risk protection platform that detects and resolves external threats before these wreak havoc. Because more data is being shared, processed or stored outside the firewall on cloud services, open databases and connected devices, the digital risk to enterprises has never been greater. Organizations worldwide rely on CybelAngel to discover, monitor and resolve external threats across all layers of the Internet, keeping their critical assets, brand and reputation secure.
